Jiovanny Adel

Mechatronics Engineer · Founder · Product Engineer

Cairo, Egypt · +20 155 055 4454 · jiovanny@kynora.dev · kynora.dev · github.com/Jovo-Jovi · linkedin.com/in/jiovanny-adel-b77b98331

PROFILE

Mechatronics engineer from Ain Shams University who has founded and run El Giovani, a B2B trading company, since 2009 — imports, procurement, operations and client accounts. Since 2021 I have built business software end to end: a bilingual website and staff dashboard for a Cairo medical laboratory, its opening-offers site, and DEV_OS Engine, a public tool in which AI agents build and review a project task by task while a person approves every gate. I am now building BETK, an Arabic-first marketplace, and B2S, a white-label business platform. Open to product-engineering, business-development and innovation roles, and to client projects.

EXPERIENCE

Independent Product Engineer · Self-employed · Cairo — 2021 – Present

- Created **DEV_OS Engine** (github.com/Jovo-Jovi/devos-engine), a public tool in which AI agents build and review software task by task under human-approved gates: a zero-dependency Node CLI and guided setup page; Claude Code, Cursor, Codex or Gemini as reviewer or builder; 20 stacks, 17 guards, 11 GitHub Actions workflows; now at v1.9.0. Its pilot shipped 25 tasks in 7 days, all passing review.
- Delivered a **bilingual website and staff dashboard for a Cairo medical laboratory**, replacing its 2018 site: 47 pages, 12 content modules, a partner-lab area, TOTP sign-in, row-level security on every table and 22 reversible migrations, with no personal data collected.
- Delivered the laboratory's **opening-offers site**, whose staff import offers from Excel with every change previewed before it saves.
- Building **BETK**, an Arabic-first marketplace for Egypt's informal sellers (43-table schema, 4 roles, row-level security default-deny), and **B2S**, a multi-tenant white-label business platform (live preview).
- Built bespoke registration, tracking and process-automation systems that replaced manual work for administrative and operational teams.

Founder & General Manager · El Giovani · Cairo — 2009 – Present

B2B trading company: sanitary ware, plumbing systems and home essentials for corporate clients across Egypt.

- Founded and scaled a profitable company from inception; run operations, procurement, logistics, sales and client management.
- Lead international sourcing and imports, negotiating directly with suppliers and agencies outside Egypt for competitive pricing and reliable supply.
- Manage end-to-end procurement — supplier evaluation, contract negotiation, fulfilment and inventory control — balancing cost, quality and lead time.
- Built long-term corporate accounts that drive repeat business and a growing B2B client base.
- Introduced internal tracking and operational systems that improved workflow visibility and reduced errors; oversee cash flow and business planning.

EDUCATION

Master's programme, Mechatronics, Robotics and Automation Engineering · Coursework completed

Ain Shams University

Research: autonomous systems using pattern recognition and camera analysis with Xbox Kinect sensors.

BSc Mechatronics Engineering · Ain Shams University 2004 – 2009

Graduation project: a power wheelchair that climbs and descends stairs on its own using sensor-based detection, with joystick navigation — PIC16F877 programmed in MikroC, AC drive inverters, modelled in Autodesk Inventor and simulated in Proteus.

TRAINING & CERTIFICATIONS

- Siemens PLC S7-300, basic and advanced — Technology Competency Center, 2008
- CNC lathe programming — ITC, 2009
- Industrial and advanced-industries training, including engine systems
- Introduction to Cognitive Project Management in AI (CPMAI) — Project Management Institute, 2026

SKILLS

Software	TypeScript, JavaScript, SQL, Python, C/C++, MATLAB · Next.js, React, Vite, Tailwind CSS, shadcn/ui · Supabase (Postgres with row-level security, Auth, Storage), Zod, Cloudflare R2 · Vitest, Playwright, GitHub Actions, Vercel
AI	Multi-agent build and review pipelines (Claude Code, Cursor, Codex, Gemini), Anthropic API, PyTorch
Engineering	Embedded systems, PLC programming, automation and control, computer vision, CNC
Business	Company leadership, international procurement and imports, supply chain, B2B sales, negotiation
Languages	Arabic (native), English (fluent)
